Taste and Safety

Alkaline water may tend to taste bitter, but it is undisputedly better than the water that flows from the faucets. Meanwhile, a slight change of taste may persist in anything that is consumed viz. tea or coffee. Yet alkaline water is truly safe for its high pH level.

To embrace amazing health benefits of alkaline water, please feel free to talk to the **alkaline water ionizer experts**, today.

JAYCON Alkaline Water Ionizer

Story

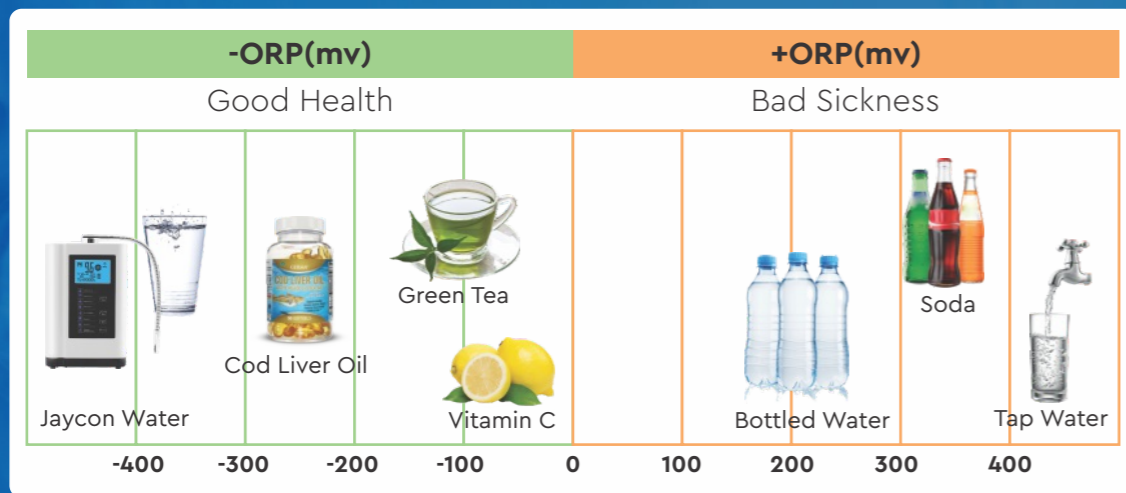

Unequivocally, water all through the human history has remained important. Water is integral to every human cell, tissue, and organ. But pause for a while to think: which kind of water?

Alkaline water contains an escalated pH level than regular drinking water. The pH level is a number that measures how acidic or alkaline a substance is on a scale of 0 to 14. And as alkaline water has a higher pH level than does plain tap water, proponents say that it can neutralize acid in your bloodstream, while some advocates that alkaline water can neutralize the acid in your body, and prevent chronic diseases like cancer.

Remember, alkaline water must also contain alkaline minerals and negative Oxidation Reduction Potential: ORP, which is the ability of water to act as a pro or antioxidant, and more the negative ORP value, the more antioxidizing it is.
